

May 7, 2003

Dear Ms. Liang,

Attached please find the results of your search request for application #09/755,815. I searched Dialog's foreign patent files, technical databases, product announcement files and general files.

Please let me know if you have any questions.

Regards,

A handwritten signature in black ink, appearing to read "Geoffrey St. Leger". The signature is fluid and cursive, with the first name "Geoffrey" being more prominent and the last name "St. Leger" following in a similar style.

Geoffrey St. Leger

TEXT:

WAYNE, Pa., July 14 /PRNewswire/ -- It's that time of year again. Wedding bells are ringing everywhere for summer brides, and countless more brides-to-be are planning their 1999 weddings and honeymoons. With so many factors to consider when planning for the big day, wouldn't it be nice to have one major concern under control from the start?

What a relief for brides to know that they can now get control of the most challenging mother of them all -- not their own mother, not even their mother-in-law, but Mother Nature! Yes, it's true! Brides are planning the weather for their weddings and honeymoons!

These savvy brides are turning to WeatherPlanner, a revolutionary new event and activity planning service that provides reliable, customized weather forecasts up to 12 months in advance. Forecasts can be obtained through the WeatherPlanner Web site at <http://www.weatherplanner.com>, or via a telephone advisory service at 800-741-PLAN, where one can speak with a personal weather advisor.

"WeatherPlanner is flexible and easy for brides to use," said Frederic D. Fox, president, WeatherPlanner. "There are three different ways to take advantage of our service. Brides can select a weather forecast for specific dates, choose the date of their wedding based upon the desired weather, or pick a honeymoon destination according to the weather they want."

"For example," explained Fox, "if you have already scheduled your wedding, you simply input the date, and you'll receive a weather forecast for that time period. Or, if you haven't decided on the date for your wedding but know the location, tell us the type of weather you want during that period, and WeatherPlanner will provide the most favorable dates. Another example of WeatherPlanner's flexibility is if you know the dates for your honeymoon and the type of weather you want, such as sunny beaches or **snow** at a **ski** resort, you can select three possible **locations** and WeatherPlanner will **recommend** the best destination."

WeatherPlanner maintains a rolling 12-month database of forecasts for more than 85,000 locations in the United States (including Hawaii), Canada and the Caribbean as well as 20 U.S. National Parks and 30 ski resorts.

Forecasts for a specific location and time period, for a one- to ten-day forecast for any period up to 12 months in advance, are available for a nominal fee of \$14.95 via the Internet, and \$19.95 per forecast if WeatherPlanner is used to suggest dates or destinations. The telephone advisory service is \$2.99 per minute. Brides can also access the five-day current conditions forecast free of charge on the Web site.

WeatherPlanner's forecasts are backed by a satisfaction guarantee of a full refund of the fee for any customer who is not satisfied with the service.

"WeatherPlanner is such a valuable planning tool for special events, especially weddings, since the weather affects so many decisions," said Fox. "Weddings and honeymoons can be greatly impacted by the weather, which can mean a significant loss of time, money and effort. The cost of a WeatherPlanner forecast is a small investment when you consider that it minimizes risk, protects against loss and provides peace of mind."

(USE FORMAT 7 FOR FULLTEXT)  
TEXT:  
...that surfaced at last week's American Meteorological Society meeting: \* More knowledge needed. "I wish they'd teach more meteorology to pilots," said Rebecca Miller, **weather** forecaster at Dallas' Channel 5 NBC affiliate television station. Because of the proximity of the huge Dallas-Ft. Worth International Airport (DFW), her station broadcasts...  
...recalls one pilot who, incredulously, asked if he should avoid funnel clouds. "Many (pilots) have meteorology degrees," she added, "but some are cavalier about the **weather** ." Miller's bottom line: "Everybody's concerned about the **weather** , but it seems to take an accident to stimulate action."  
\* Stimulated to action. Dale Raymakers of DTN Kavouras, Inc., a Minnesota-based private **weather** -service company, offered a perfect example of Miller's quip about the catalyzing effect of an accident. After the 1994 fatal crash of an ATR...  
...jumped from zero to half a dozen. >> Raymakers, e-mail: draymake@kavouras.com << \* Maximum constraints. Lt. Col. Dewey Harms of the Air Force's 45th **Weather** Squadron at the Kennedy Space Center in Florida described the ferry flight of the Space Shuttle on the back of a special

747 from its Vandenberg AFB desert landing site to the Florida launch site as "aviation's most **weather** -sensitive mission." Imagine these Shuttle ferry flight constraints on commercial airline operations: \* No flight through precipitation. \* Daylight only. \* Temperature not lower than 15 degrees F...

...gaskets, fittings, etc., on the Shuttle's systems, which are inerted for these ferry flights. \* Vision for the service. John Kelly, director of the National **Weather** Service (NWS), announced his goal is for the organization to become "America's 'no surprise' **weather** service." More specifically, he believes the NWS should provide "(forecasting) products the user wants, can use and can trust." More attention will be devoted to

...instead of forecasts in text, he said. His point was seconded by United Airlines' Carl Knable, who chaired a 1998 review of the NWS' Aviation **Weather** Center (AWC) at Kansas City, Missouri. Knable described AWC text-based formats as antiquated. "The product services need to be revised and refocused," he said. >> Knable, e-mail: carl.knable@ual.com << \* Weathermen being held accountable. Mario Ouellet, a meteorologist with the aviation **weather** services of Nav Canada, described the performance measures his organization has implemented. Among them: \* At least 95 percent of all terminal aerodrome forecasts (TAF's...

...on time for each site each month. \* When a TAF amendment is required, it should be done within 20 minutes of the receipt of the **weather** observation requiring it 90 percent of the time. \* If an aerodrome is forecast to have VFR conditions, it should experience them 95 percent of the...

...challenging." >> Ouellet, tel. 613/563- 5607 << \* More standardization. Jim Henderson of the aforesaid AWC announced that commencing in May, 1999, all of his organization's **weather** charts will be published according to the ICAO standard. A new map covering the south polar region also will be introduced covering flights between Australia and South America. A new feature, in development, will allow customers to enter takeoff **location** and **time**, the destination point and **time**, and the system will **advise** them of all the charts needed. >> Henderson, e-mail: james.h.henderson@noaa.gov < \* Don't forget. The FAA's Frances Sheretz said the plan to radio updated **weather** information to pilots under the "Cockpit **Weather**" program could have a negative impact on safety. There is a potential for information overload. "More things in the cockpit are not necessarily good," she cautioned. "Every minute of 'heads down' is a minute you're not looking out the window, (creating) the potential for a mid-air collision." \* **Weather** -related delays. Tom Fahey, meteorology manager for Northwest Airlines, cited an FAA estimate that delays caused by **weather** cost the airline industry about \$1 billion annually; other sources place the cost considerably higher. Indeed, the problem faced by the airlines - delay as a means a hazard avoidance - is very similar to that faced by the space-launch industry. Michael Maier, a contract **weather** expert at Patrick Air Force Base, Florida, said, "Adverse **weather** is the leading cause of launch delays and scrubs." The cost of a one-day delay is considerable: \$850,000 for the Space Shuttle and \$1 million for the Titan booster. For this reason, considerable effort is devoted to accurate **weather** forecasting. About \$10 million per year is spent for **weather** services at the Eastern Range (Kennedy Space Center/Patrick AFB). "It's more than what many countries spend for their entire **weather** function," Maier observed. >> ...O'Hare and the Washington DC to Boston corridor. "This is the full nine yards run on a supercomputer," he declared. The computerized model of **weather** sucks up data from satellites to soil sensors. By the way, isn't "Kelvin," a measure of temperature, a perfect

name for a meteorologist. Initial...

...storm front and drag it over to Atlanta." Which, of course, is the major hub for rival Delta Air Lines. \* Best of show. Of 300 **weather** -service organizations in the exhibit hall, the National Center for Atmospheric Research at Boulder, Colo., ran away with top honors. In a mini-theater it presented its 3D computer animations of various **weather** phenomena. A moving panorama of clear air turbulence in the skies high over Boulder, appearing from the perspective of a pilot in a cruising airliner...

...on record. The National Oceanic and Atmospheric Administration (NOAA) reports that global temperatures in 1998 were the warmest in the past 119 years. More extreme **weather**, affecting schedules and safety for the airlines, seems to be occurring. Some examples: \* Record tornado counts in Florida and the Central Plains (with 20 spotted...1.5 million passengers are flown daily in the U.S., and keeping their flights on time and out of the danger posed by foul **weather** are the primary goals: "The impact of **weather** on the safety and efficiency of the national air transportation system in the U.S. is well known. The costs associated with delays alone are on the order of \$5 billion per year, 65% of which are generally attributed to **weather**. Contributing factors include extreme surface **weather** (e.g., fog, high winds, freezing precipitation), along with thunderstorms and their associated wind shear and turbulence at all flight levels. The other major consideration...

...course the most important. National Transportation Safety Board statistics from 1982 to 1995 show that 33 percent of all commercial carrier accidents were attributed to **weather**, with 33 percent of all fatal accidents being **weather** -related." >> Droegemeier, e-mail: kkd@ou.edu << ...
